## Case Study: DoD SECURITY REFRESHER

---

### Challenge

Much like the DoD poster campaigns that ADG has participated in, the need for security training and awareness has proven to be vital. Many federal employees and contractors need to be trained in security practices that help to protect their person, their information, and ultimately their country. The problems in implementing such training have generally been providing a product that is engaging, accurate, consistent, and technically sound that yields measurable results.

### Solution

ADG produced a media-rich application using Macromedia® Flash complete with animation and voice over, as well as several interactive timelines and complete testing and user assessment. The web-based application is developed in a SCORM compliant package that allows tracking of each individual, their scores, and global metrics for all learners and their performance improvement.

### Result

As a result of experience in HMI and UI, ADG produced a course that meets the training requirements at hand while engaging and entertaining the course's audience. As an added benefit, ADG provided a vast repository of resources for security instructors to draw from for their own training efforts. Items such as photos, movies, timelines, sound bites, and the like are now accessible across the enterprise to enhance briefings and learning opportunities to benefit the workforce, the organization, and our country. A satisfying results set, to say the least.
